# WHAT IS NPM?

NPM

Npm is a package manager, we use to install node modules

Check previous post for node modules

Install Module

## It's easy to download & install modules

use this command in your terminal

npm install package-name
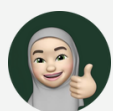

install "node-emoji" module

npm install node-emoji

this command will download & install "node-emoji" package

NPM creates a folder "node_modules" in your project where all of your installed modules will be placed.

**projectname/node_modules/node-emoji**

Use Module

Create a file index.js in your node project

Print a smile emoji

```js
const emoji = require('node-emoji')

console.log(emoji.get('smile'))
```
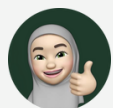

index.js

run **node index.js** in terminal
you'll see smile emoji in **console**
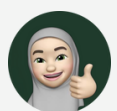

# We'll meet again in next post!
